

DR Panel Protector

Avoid the \$80,000 Oops!

You just purchased a top-of-the-line Digital Radiography system and now you need to take weight-bearing X-rays of feet (AP view). The manufacturer says a patient can stand on the panel – but if it breaks, you're the one who has to pay to have it fixed or replaced. Ouch!

The DR Panel Protector provides a safe, easy way to take weight-bearing X-rays of feet (AP view). To use, simply place the unit over the DR panel that is positioned on the floor. Patients step onto the DR Panel Protector with as much weight as needed to get the desired image.

The DR Panel Protector works with most DR systems, including those offered by Canon, GE Healthcare, Philips, Quantum, Siemens, Shimadzu, Toshiba, and Trixell.

Clear Image Devices' series of patient positioning devices is the result of innovative research and design, responding to the expressed needs of radiographers. CiD produces only high-quality products that enhance medical care and promote the continued advancement of medical imaging.

- *Weight capacity of 500 pounds*
- *X-ray lucent faceplate allows X-rays to pass through the DR Panel Protector with no significant absorption or scattering*
- *Achieves optimal positioning for weight-bearing AP foot images while keeping the patient's feet close to the target image platform, ensuring high quality images with no significant magnification*
- *Non-slip rubber grips keep the DR Panel Protector securely in place on a hard, smooth floor*
- *Cable notch in Panel Protector frame accommodates the cable connection from the digital DR panel to the host system*
- *Easy to keep clean, the DR Panel Protector is made from germ-resistant, non-porous polyethylene, polycarbonate, and stainless steel*
